OVERVIEW

Ledger is the centerpiece of Fairbanks Scales data collection software initiatives. As an intuitive web-based interface, it provides easy PC access to scale data collected on a Fairbanks FB4000 NEMA 4X instrument by its proprietary LabelBank/DataBank software.

At setup, Ledger takes users through a simple process that effectively converts their scale data into critical reports that can be used to improve efficiencies and profits.

REPORTING

Ledger for LabelBank/DataBank features a variety of reports identified as “key” to Fairbanks weighing customers. These include product, transaction and system analytics such as:

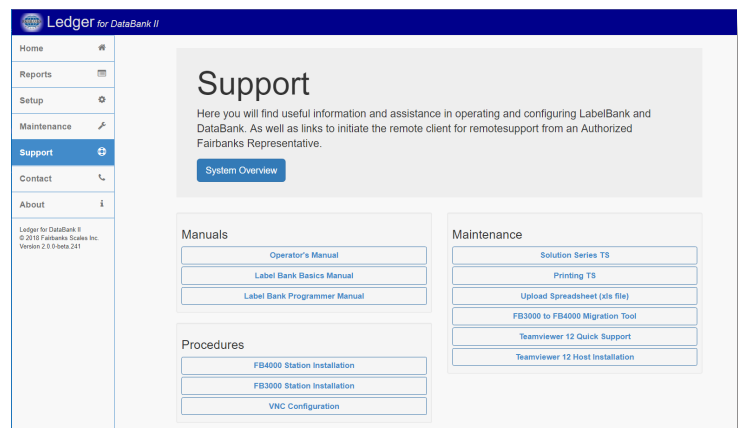

- Daily Output, Raw Productivity, Shift Data, Pallet Manifest, Lot Totals and Product Give-Away.
- Transaction and Integration tables.
- Product, Manufacturer and Distributor lists.

For an additional fee, customers can specify custom reports for particular processes or applications and these will be included in their Ledger tool set.

SUPPORT

Fairbanks Scales products are designed to perform with little or no maintenance. If, however, a customer does encounter a problem while using Ledger for LabelBank/DataBank, they can find useful troubleshooting information in Ledger’s built-in support section.

This section features manuals for operating and configuring LabelBank/DataBank software, installation procedures for compatible Fairbanks instruments, various maintenance tips and a link to initiate remote support from an Authorized Fairbanks Representative.
