

Go Green!

Process Trucks Quicker

Reduce Lines at the Scale House

Lower Fuel Costs

Cut Emissions

According to the United States Environmental Protection Agency, domestic greenhouse gas emissions increased 3.2 percent between 2009 and 2010. This was primarily due to an increase in carbon dioxide (CO₂) emissions associated with fuel and electricity consumption.

In 2008, the United Nations traced approximately 18 percent of total global greenhouse emissions to activities in the United States, a nation with less than five percent of world population. Subsequent annual emission increases means America remains one of the world's worst greenhouse gas offenders, second only to China.

Sources: U.S. E.P.A. Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990 – 2010, April 15, 2012; United Nations Statistics Division, CO₂ Emissions 2008 estimate.

Secure, Cost-Effective and Dependable

- **Time saver — reduces truck processing time**

Reducing processing time keeps trucks on the road instead of in line at the scale. That means less labor, more driver/truck productivity, less fuel wasted sitting idle and reduced CO₂ emissions.

- **Fully integrates with your current hardware & software systems**

No need to manually enter transactions into your systems. Plus, the MatreX' system allows real-time remote monitoring from anywhere.

- **Automated attendant — reduces labor costs**

No need for a scale house attendant. Keeps traffic flowing without unnecessary interaction.

- **User-friendly with visual and bi-lingual audio prompts**

Easy-to-use and can provide instructions to drivers in their preferred language.
