Capture and store static images for each scale transaction with Fairbanks' new Image Capture Module for Interact software.

MEET VERIFICATION DEMANDS WITH IMAGE CAPTURE

More and more customers are demanding additional verification in today's business climate. Fairbanks' Image Capture Module for Interact gives you the ability to provide a high level of verification by producing a still image of the vehicle on the scale during each weighing transaction.

Customers control the mounting location and positioning of the system camera(s) in order to capture whatever is most important to the operation's verification standards. Because the system can utilize up to two cameras, images of the truck, driver or license plate can be captured during the transaction process.

IMAGE CAPTURE MODULE OPTIONS

- Capture two different images per transaction
- Print the images on the scale ticket.
- Incorporate the images into the Interact transaction record.

IMAGE CAPTURE MODULE FEATURES

- Designed to work with Interact SE and Professional.
- Captures printable images (requires compatible printer).
- Images instantly displayed on weigh screen.
- Up to two Ethernet cameras can be connected to system.
