T-BELTING ACCESSORIES FOR ABOVEGROUND TRUCK SCALES

Protect your aboveground truck scale from inclement weather with T-Belting accessories from Fairbanks Scales.

WHY IS T-BELTING NECESSARY?

Truck scale environments that experience substantial amounts of seasonal snow, ice or mud find that these materials naturally collect and build-up in the area between an aboveground scale's weighbridge and approach. When buildup occurs, the materials can seep beneath the platform. Mud typically seeps down and then dries out and hardens. The dried mud can prevent the scale from moving. Snow or ice thaws, seeps down and then refreezes, literally "freezing up" the scale.

To combat these seasonal threats, Fairbanks offers T-Belting accessories that cover the gap between the scale's weighbridge and its approach. T-Belting prevents the ingress and build-up of snow, ice and mud below the scale, where it can reach load cells or electronics and potentially cause weighing errors or fully shutdown the scale until addressed.

HEAVY-DUTY STEEL T-BELTING

Fairbanks heavy-duty Steel T-Belts are constructed from 4" wide flange steel I-beams and are painted safety yellow. You can see, from the featured images, how Steel T-Belting prevents materials from falling between the scale and the approach.

Steel T-Belting comes standard in lengths of 10', 11' and 12'. Two (2) T-Belts are required for complete protection, one for each end of the scale. Custom sizes can be ordered.

EPDM RUBBER T-BELTING

Fairbanks offers a T-Belting product that's made from EPDM rubber and is sold by the foot.

SPECIFICATIONS

Steel T-Belting

Width	4"
Lengths	10', 11' and 12'
Thickness	1/4"
Construction	A36 Steel
Paint	Weather resistant acrylic urethane industrial paint system, safety yellow
Installation	Drop in place

Rubber T-Belting

Width	4 1/2"
Lengths	Sold by the foot
Thickness	1/4"
Construction	EPDM - synthetic rubber
Color	Black
Installation	Press in place
